

testing::TestWithParam
< AttackTestParams >

```
classDiagram
    class AttackTest
    class TestWithParam["testing::TestWithParam< AttackTestParams >"]
    AttackTest --|> TestWithParam
```

The diagram illustrates an inheritance relationship. At the bottom is the 'AttackTest' class, represented by a gray-shaded box with three horizontal compartments. The top compartment contains the name 'AttackTest', while the other two are empty. Above it is the 'testing::TestWithParam' class, represented by a white box with three horizontal compartments. The top compartment contains the text 'testing::TestWithParam' followed by '< AttackTestParams >' on the next line. The middle and bottom compartments are empty. A blue arrow with an open triangular head points from the top of the 'AttackTest' box to the bottom of the 'testing::TestWithParam' box, indicating that 'AttackTest' inherits from 'testing::TestWithParam'.
